

Vacancy Software Engineer

Software development engineer for optical measurement techniques

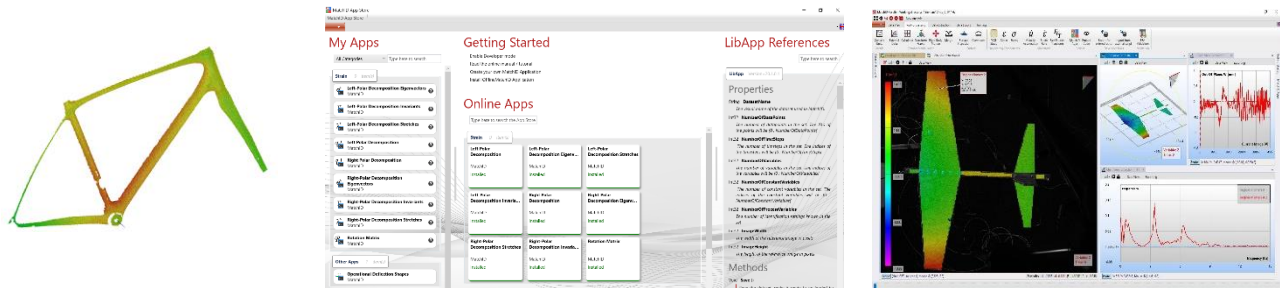

YOUR COMPANY

MatchID offers imaging solutions to measure the displacements and deformations of materials and structures. By integrating these measurements with design and development, we naturally validate computer simulations and accordingly play a key role in various innovative engineering verticals, ranging from

- small (nano-components) to large-scale (aerospace)
- brittle (concrete) to extensive (films) deformations
- traditional to additive manufacturing production techniques

MatchID is very R&D driven, located in the heart of Gent, hereby encompassing a young and dynamic team with an international customer base in Europa, USA and Asia.
